

## KEEP THE VALUE OF YOUR ORGANIZATION WITHIN YOUR ORGANIZATION

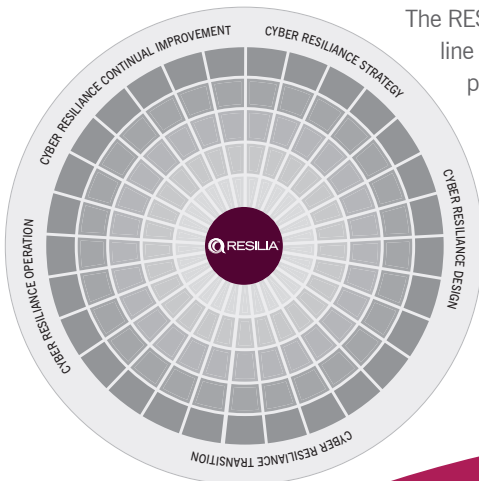

“It takes 20 years to build a reputation and five minutes to ruin it”

**Warren Buffett**

### Put your people at the centre of your organization’s cyber resilience strategy Introducing the RESILIA™ Snapshot.

The majority of cyber-attacks succeed because of human error – the unwitting actions of anyone in the organization, regardless of their role or responsibility, meaning your people are prime targets for hackers.

**But how can your organization understand the risks and vulnerabilities that your people are exposed to? And are you prepared for when the inevitable cyber attack hits?**

The RESILIA Snapshot has been developed in line with the RESILIA cyber resilience best practice, a framework that builds upon the widely used ITIL lifecycle.

INSERT LOGO HERE

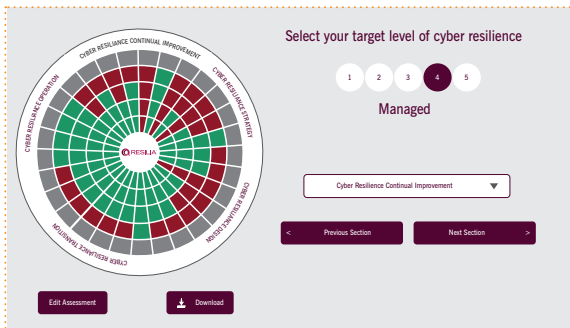

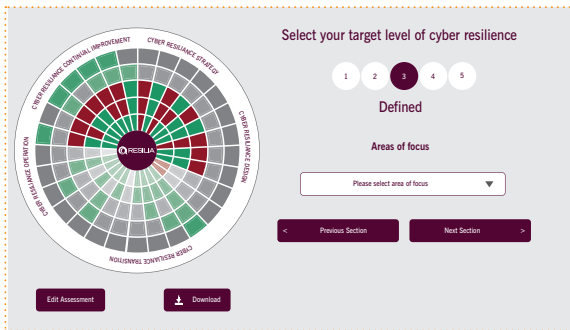

The Snapshot provides a straightforward and repeatable method of understanding the capability and maturity of cyber resilience in your organization, enabling you to:

- Assess current areas of strength and weakness across all areas of cyber resilience, presented in a simple graphical format
- Identify a pathway to improvement against a target maturity level, with executive summary for your organization
- Establish an effective balance of people, process and technology controls

The RESILIA Snapshot is hosted in a ISO 27001 data center located in the United Kingdom, all data is encrypted at rest and in transit, and all systems undergo regular external penetration testing.

This data security is further enhanced by a logical separation of the assessment data from any personal or company identifiable information. Robust access controls limit any physical or digital access to only authorized personnel.

**Contact xxxxx today for a free Snapshot assessment and put your people at the centre of your organization's cyber resilience strategy.**
